

From Holz, Larrouy-Maestri, & Poeppel (2021)

Emotion classification and rating patterns of the stimuli of the VIVAE dataset (Holz, Larrouy-Maestri, & Poeppel, 2022). **(a)** Results of the forced choice task. **(b)** Results of the rating task. **(c)** Emotion classification accuracy as a function of valence, emotion, and intensity. Violin plots represent the effect of intensity on correct emotion classification, box plots represent the interaction of valence (orange: negative, blue: positive) and intensity (low to peak), and lines represent the interaction of emotion and intensity on correct emotion classification. Error bars indicate 95% confidence intervals. n.s. = non-significant. * $p < 0.05$. ** $p < 0.01$. *** $p < 0.001$.
